CLAIMS

1. A decorative material comprising at least a substrate, a low-luster pattern ink layer partially formed on the substrate, and a surface protective layer which is present on and contacted with the low-luster pattern ink layer so as to cover a whole surface including both a region where the low-luster pattern ink layer is formed and a region where no low-luster pattern ink layer is formed, wherein the surface protective layer is formed by crosslinking and curing an ionizing radiation-curable resin composition, and provided therein with a low-gloss region which is located in a portion just above the low-luster pattern ink layer and in the vicinity of the portion, and visually recognized as a concave portion.

- 2. A decorative material comprising at least a substrate, a low-luster pattern ink layer partially formed on the substrate, and a surface protective layer which is present on and contacted with the low-luster pattern ink layer so as to cover a whole surface including both a region where the low-luster pattern ink layer is formed and a region where no low-luster pattern ink layer is formed, wherein the surface protective layer is formed by crosslinking and curing an ionizing radiation curable resin composition, and a low-luster pattern ink forming the low-luster pattern ink layer contains a non-crosslinked urethane resin as a binder and the ionizing radiation curable resin composition contains a (meth)acrylate monomer.
- 3. The decorative material according to claim 2, wherein the low-luster pattern ink forming the low-luster pattern ink layer contains the non-crosslinked urethane resin and an unsaturated polyester resin as a binder.
- 4. The decorative material according to claim 2 or 3, wherein the ionizing radiation-curable resin composition contains a (meth)acrylate

monomer solely.

- 5. The decorative material according to any one of claims 1 to 4, wherein the low-luster pattern ink forming the low-luster pattern ink layer has an uneven thickness.
- 6. The decorative material according to claim 5, wherein the low-luster pattern ink layer has a thick film region having a relatively large thickness and a thin film region having a relatively small thickness, and a portion just above and in the vicinity of the thick film region is the low-gloss region having a relatively low gloss, whereas a portion just above and in the vicinity of the thin film region is the low-gloss region having a relatively high gloss.
- 7. The decorative material according to any one of claims 1 to 6, wherein the surface protective layer contains fine particles, and an average particle size of the fine particles is close to a plus-side value of a maximum thickness of the surface protective layer located just above the low-luster pattern ink layer.
- 8. The decorative material according to claim 7, wherein a coefficient of variation (CV value) of a particle size distribution of the fine particles which is represented by the formula: [(standard deviation of particle size/average particle size) x 100] is 30% or lower.
- 9. The decorative material according to claim 7 or 8, wherein the fine particles satisfy a relationship represented by the following formula (I):
 - $1.05 \times t_M \leq d_A \leq t_G \qquad \qquad \text{(I)}$ wherein d_A is an average particle size of the fine particles; t_M is a maximum thickness of the surface protective layer located just above the low-luster pattern ink layer; and t_G is a thickness of the surface protective layer located

in a region where no low-luster pattern ink layer is formed.

- 10. The decorative material according to any one of claims 7 to 9, wherein the surface protective layer contains the fine particles in an amount of 2 to 20% by mass.
- 11. The decorative material according to any one of claims 1 to 10, wherein the surface protective layer is formed by crosslinking and curing the ionizing radiation curable resin composition containing an ethyleneoxide modified polymerizable compound, and contains particles of baked kaolin.
- 12. The decorative material according to any one of claims 1 to 11, wherein the low-luster pattern ink forming the low-luster pattern ink layer contains an extender pigment.
- 13. The decorative material according to any one of claims 1 to 12, wherein the ionizing radiation-curable resin composition is an electron beam-curable resin composition.

14. The decorative material according to any one of claims 1 and 5 to 13, wherein a surface of the surface protective layer located above the low-gloss region has a convex shape.

15. The decorative material according to any one of claims 1 to 14, further comprising a penetration-preventing layer formed between the

substrate and the low-luster pattern ink layer.

16. The decorative material according to claim 15, wherein the substrate

is a penetrable substrate.

5

10

15

- 17. The decorative material according to any one of claims 1 to 16, wherein a colored layer, a pattern layer and the penetration-preventing layer are successively laminated on the substrate, and the low-luster pattern ink layer as well as the surface protective layer which is present on and contacted with the low-luster pattern ink layer so as to cover a whole surface including both a region where the low-luster pattern ink layer is formed and a region where no low-luster pattern ink layer is formed, are successively formed on the laminated layers.
- 18. The decorative material according to claim 17, wherein the pattern layer has a woodgrain pattern, and the low-luster pattern ink layer forms a low-gloss region corresponding to a vessel portion of the woodgrain pattern.

19. A decorative plate comprising a substrate plate and the decorative material as defined in any one of claims 1 to 18 which is attached onto the substrate plate.
